

## About iTel

*Unrivalled Infrastructure. Unrivalled Support.*

### We build networks that no other provider can.

Our interlaced '*network of networks*' allows us to create something special.

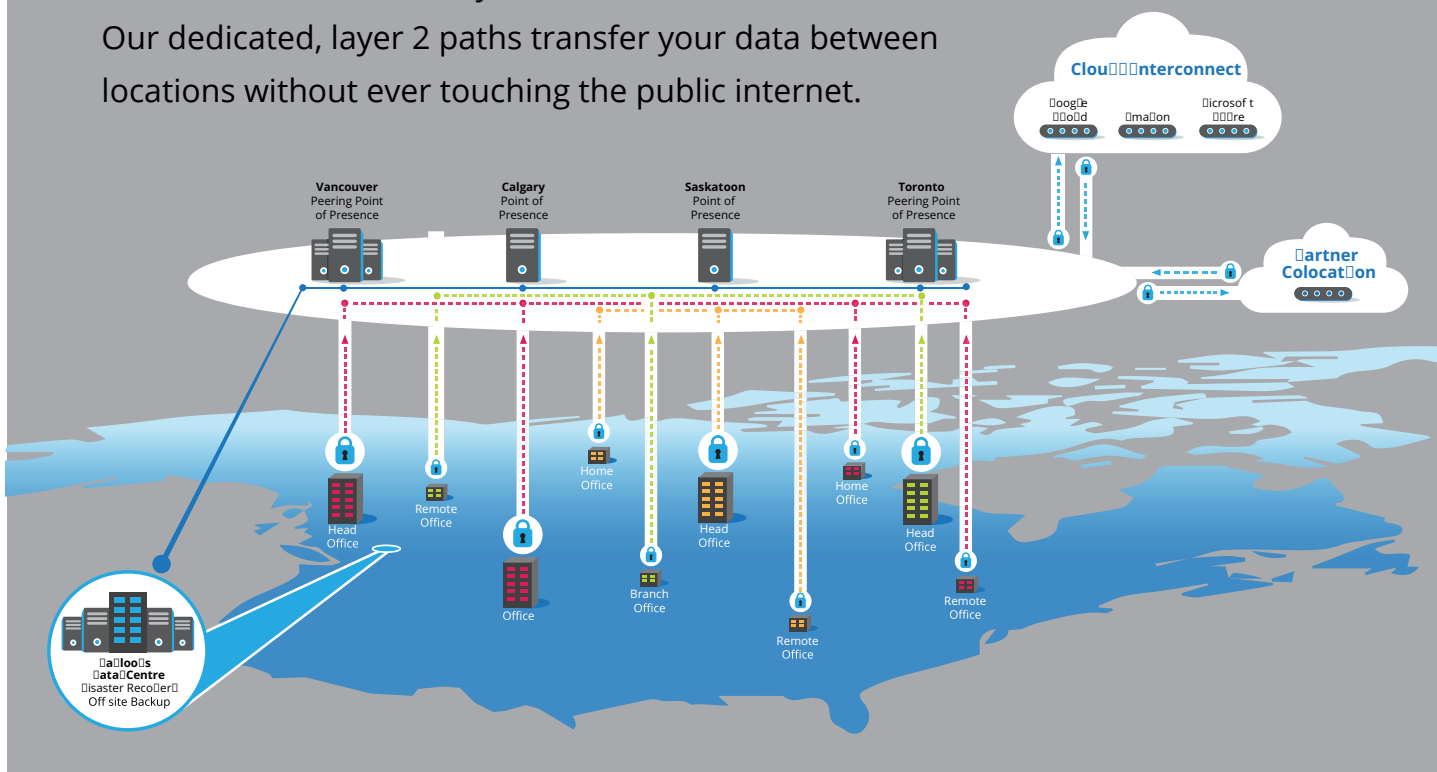

iTel specializes in customized and innovative industry solutions. We tailor our services to your business needs to maximize productivity, cut costs, and increase ROI. If you have networking needs and IT pain points, iTel has a solution for that.

# Security

*Peace of mind networks*

We partner with 25 peering providers, producing the most secure network for your business' critical data. Our dedicated, layer 2 paths transfer your data between locations without ever touching the public internet.

## Full service, winning solution

This completely secure network comes along with an industry-leading SLA and 24/7 Canadian tech support.

## Unlimited

All iTel connections offer unlimited bandwidth usage. Send and receive as much data as your business needs, without dealing with caps and overage fees.

## Solutions

*High performance connectivity*

*If you have a networking problem, we can solve it. Whatever your organization's needs are, we likely have the right solution for you. Here is just a small sample of what we can do:*

### Connecting Remote Users

Organizations with multiple locations can connect seamlessly over our MPLS network. These direct, Layer 2 connections decrease latency and increase security.

### Challenging Location

Rural offices or temporary locations can increase internet speeds with Bonded Internet. Bonding connects multiple connections (Fibre, Cable, ADSL, etc.) into one super pipe of up to 5X more bandwidth. We can service anywhere that infrastructure currently exists and even where it doesn't with LTE.

### Multiple Services

Think of how easy it could be dealing with just one single provider for your networking services. iTel offers voice, internet, and cloud services. Simplify IT and billing with one support number and one bill for all your networking services.

### Heavy Data Usage/Upload Needs

Large staff numbers at one location or high-tech companies uploading to the cloud suffer from overworked networks. iTel fibre offers unlimited bandwidth, high-speed symmetrical connectivity on a large pipe built to handle your all your data.

## Services

*Save money, boost productivity, and see results*

Everything from SIP to Colocation, we cover it all. Power your business with a turnkey solution for every networking need. The ease of one bill, one support number, and one company at your disposal.

### Voice
