Office Anywhere

Enterprise-Grade, Business-Paid, In-Home & In-Office Connectivity

iTel Office Anywhere allows businesses of all sizes to provide their remote employees with a dedicated, independent internet connection anywhere in Canada or the USA. With additional tools for mobility, security, and more, you can ensure your employees have secure and reliable bandwidth to support high productivity – while their home internet remains separate, available for streaming and other personal use.

Empower your remote team – Let's connect.

Revolutionizing Remote

The New WAN for Seamless Connectivity

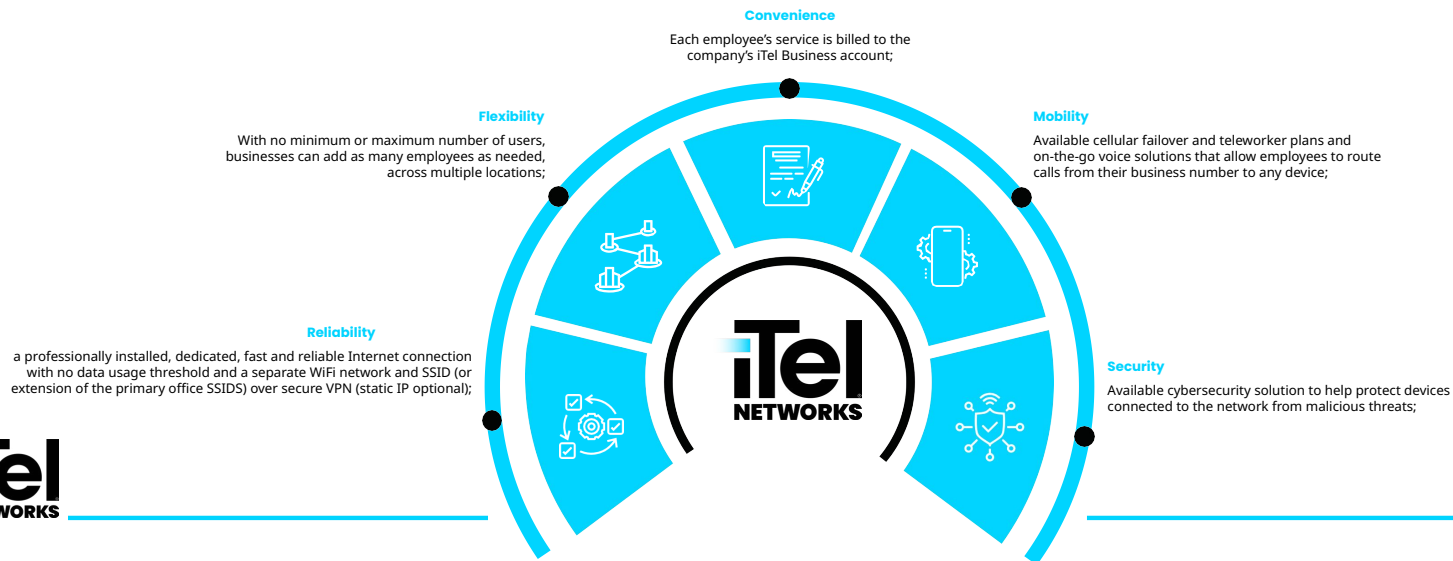

The New WAN

Connect any remote workers home to your corporate office network using an automatically configured encrypted Layer 2 tunnel which extends the existing, that is no different than sitting in the office.

No Office, No Problem

If you don't have an office, iTel can host a Manager Router in any iTel datacenter, allowing a headless design no longer bound by the speed or reliability of the primary office location. This provides an easy extension to the cloud and reduces connectivity expenses at the office location.

Empowering Businesses **with Seamless Connectivity**

iTel Office Anywhere is beneficial for businesses across all industries and is ideally suited for those in service-oriented industries such as legal, accounting, advertising, healthcare, and insurance.

iTel provides vital Internet and phone connectivity to businesses of all sizes. We know how critical it is for businesses to stay connected. Through iTel's vast "network of networks", expert engineers and award-winning business tools and services, we are making sure businesses remain connected, secure and agile – from anywhere, on any device.
